White Sands National Monument

CPYRGHT

CPYRGHT

SHIMMERING wavelike dunes, fresh as a wilderness snowfall, blanket a vast area in the Tularosa Valley. Ever growing, ~~the hills inch forward before the prevailing south-west winds.~~

The world's largest gypsum desert was created millenniums ago when the mineral was washed from the flanking San Andres Mountains, deposited in dry lake beds, and blown by winds into dunes—a process still going on. Established in 1933, White Sands National Monument preserves near-~~ly 30,000 acres of the~~ ~~active natural landscape~~ ~~that thousands of visi-~~ ~~tors come here each~~ ~~year.~~ the Park Service de-~~velops~~ ~~like picnic shelters~~ (lower left). To keep a way open for cars, employees spend countless hours grading and scraping away the sugar-fine sand.

Surprisingly, the desert supports much plant life—yucca, squawbush, rabbit-brush, cottonwood. Many animals, including badger, skunk, fox, rabbit, coyote, gopher, and kangaroo rat, make excursions into it.

~~Permanent inhabitant of the~~ ~~desert is the beach-loving~~ ~~invertebrate~~ ~~inhabitant of the~~ ~~desert.~~ (left).
